EXPERIENCE

Backend developer

Tül, May 2022 - Present

I work in the devexp team where we design and develop solutions that can be implemented by the rest of the teams in the company.
- I am in charge of the development and implementation of backend libraries that can be used in various microservices.
- We developed a platform to optimize processes like managing microservices, secrets and environments.

Backend developer

Rappi, August 2020 - May 2022

I worked in the identity area where we developed machine-learning solutions to validate people's identities.
- I was in charge of maintaining the stability of my team's microservices in 9 countries.
- Designed and planned the backend tasks for each sprint according to the SCRUM methodology.
- Developed and maintained services using Python and Kotlin languages; frameworks like Flask, Faust, SpringBoot and Apache Kafka; databases like Redis and SQL and tools like Docker, Jenkins and Git.
